Honors

2023 **Member of the Swedish Young Academy**

2023 **Statistician of the year 2022**, Statistikfrämjandet, joint with Jens Finnäs and Jonas Wallin
Motivation: This year's statistics promoters are a group of statisticians and data journalists whose advanced statistical model has shown accurate forecasts ahead of the 2022 parliamentary election. The model is based on a weighting of the last 20 years' opinion polls and election results, and uses a Bayesian model in combination with computer-intensive methods to answer the question "Who would win the parliamentary election if there were an election today?"
 Their method has attracted a lot of attention and is a good example of how advanced statistics can contribute to the benefit of society.
